SOLUTIONS TO INDUSTRY

Since its establishment as an industrial fan manufacturing company in 1966, CFW has been applying fan and air technology to provide solutions in a wide spectrum of industrial applications. Many of these systems are exported and then commissioned by our South African based technicians.

DRYING

Standard and custom-designed refrigerant, desiccant, and hybrid drying systems are utilised to dry anything from flowers to industrial substrates. The picture overleaf shows a stainless steel rotary drier system being pre-assembled at our works before shipping to South America.

DUST AND FUME CONTROL

Ever increasing environmental awareness and stringent government legislation on worker safety demands that effective solutions are put in place by industry. CFW, with over 80 years combined experience, is meeting this demand with cyclonic filtration systems for dust control and scrubber systems for hazardous fume control. Pictured alongside is a stainless steel scrubber system (top left) designed for a food production facility, and a multi cyclone sawdust control system (bottom left) at a large furniture production plant.

MATERIAL HANDLING AND PNEUMATIC CONVEYING

At CFW we know that the fast and efficient movement of process materials is vital to the successful operation of any production plant. Our engineers will design systems incorporating our range of rotary valves, screw conveyers and belt conveyers to achieve this aim.

INDUSTRIAL VENTILATION & EVAPORATIVE COOLING

Commercial, agricultural and industrial buildings are often subject to high solar and internal heat loads which can be effectively cooled by the latest technology evaporative coolers and large ventilation fans and roof units. Evaporative cooling is economical to install, run and maintain and also has the benefit of pressurizing the building with cooled filtered air which greatly reduces the ingress of harmful dust.
